

## FLOOR TO WALL MOUNT

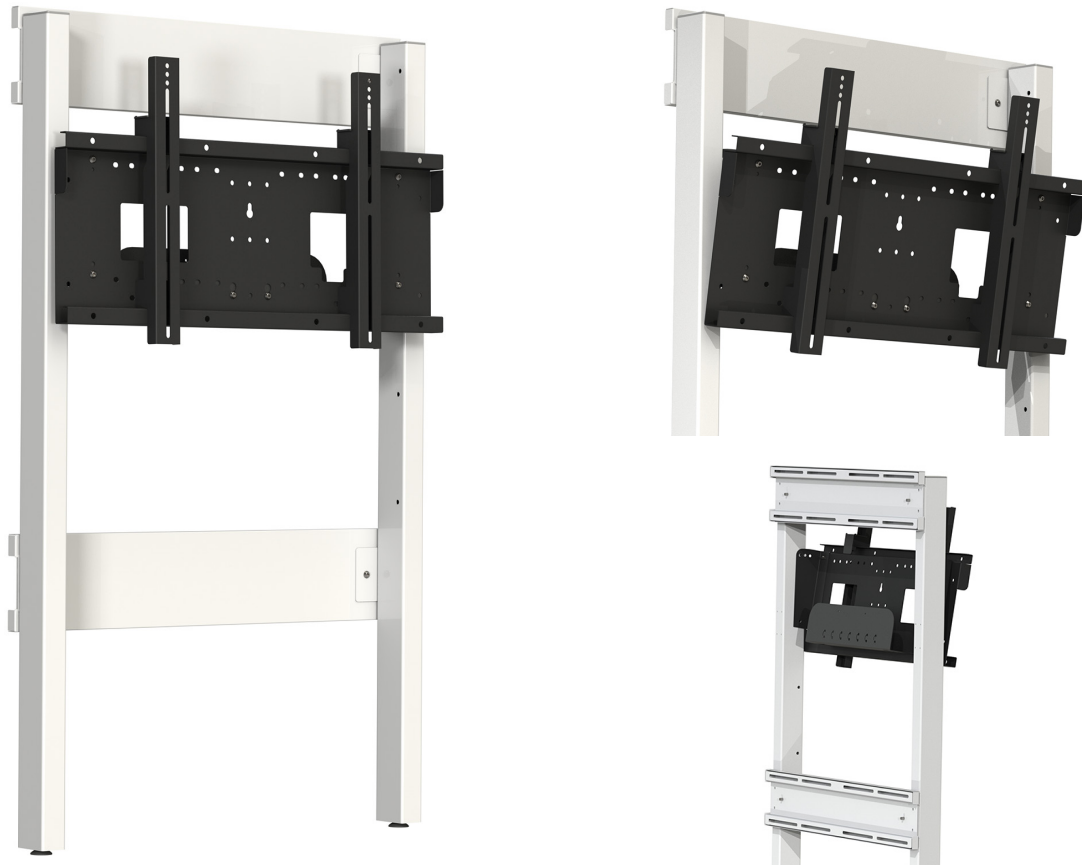

### Slimline mount with Tilt for Touch Screens

Our LED/LCD Slimline Multi-Position Mount is a lightweight, durable and large capacity mount designed for large format touch screens. With 600mm of height adjustment in 200mm increments and tilt up to 10 degrees.

The twin legs transfer the weight of the screen and brackets directly to the floor, with the fixings to the wall acting as a restraint to keep the screen upright rather than taking the full load of the screen onto the wall.

Slimmer to the wall than the standard mount, it also includes the Easy Install Bracket as standard, which enables multiple fixings into walls with a twin slotted wall bracket, top and bottom. This provides 4 rows of fixings up to 875mm wide, providing plenty of opportunity to fix into studwork. Suited to walls which may not be strong enough to fix the screen to directly, it also works well for blockwork and brickwork. The fixings are then neatly hidden behind the cover.

An optional Power Tray allows the pre-installation of electrical power cables for the screen and peripherals in advance of the installation, reducing time on-site. A single cable powers 6 outlets - (4 way power bar and 2 x IEC outlets) more than enough for most requirements. And with cable management, the installation is safe and looks professional.

#### Features:

Tilting brackets allow up to 10 degrees of tilt for the perfect viewing angle.

Screen mount sizes: Standard 200-800mm W x 100-440mm H, Optional 200-800mm W x 100-600mm H.

Maximum screen weight 120kg.

Excellent cable management with an optional easy access Power Tray with integrated power and cable management.

The height to the centre of screen - 700-1300mm in 200mm increments.

Optional 100mm wall mount brackets for use with dado rails and electrical conduits are available, product code 8959.
